

Archeology

An initial desk-based study highlighted a number of local Historic Environment Records (HERs) within the site; however, none of these are located within the study area. AOC Archaeology have been commissioned to undertake a walkover survey and produce an impact assessment. The results from this will be used to refine the wind farm design and minimise impacts.

Cultural Heritage

Cultural Heritage considers monuments of national significance, such as Scheduled Monuments (SM), 'A' Listed Buildings, and World Heritage Sites, as well as regionally significant monuments, such as 'B' Listed Buildings and Conservation Areas. Features within 2km of the turbines are predicted to be most impacted. Twelve Scheduled Monuments and one archaeological sensitive area (ASA) have been identified within 2km of the Proposed Development. This can be seen on the map below.
